STUDENT LEARNING OUTCOMES:

By the end of this course, a student should:

1. Explain and demonstrate how to read a mechanical drawing.
2. Demonstrate how 3-D objects are represented on a 2-D space.

COURSE OBJECTIVES:

By the end of this course, a student should:

1. Explain the difference between the 3rd angle projection and the 1st angle projection. Discuss what the 3rd angle projection means. Show the symbol for the 1st angle projection.
2. Define Geometric Dimension and Tolerance (GD&T). State the objective of GD&T.
3. Identify the various welding symbols. List safety requirements as it relates to welding.
4. Explain how to read the requirements and interpret the drawings on a blueprint. Discuss what is meant by the mono-detail system. Discuss the drawing standards that appear on a blueprint.
5. Define orthographic projection. Describe how models represent a 3-D object on 2-D drawing paper.
6. Identify the terms used on mechanical drawings. Explain how to convert 2-D drawing views back into 3-D dimensional parts.
